

RAFCi FORECOURT CONTROLLER

SPECIFICATION

RAFCi forecourt controller is designed to provide oil companies with the flexibility to mix POS and forecourt equipment of any brand and make.

The RAFCi handles the characteristics of the forecourt equipment and provides an easy and stable integration of the forecourt control with the POS. Using of RAFCi isolates POS suppliers from the often tricky handling of the forecourt and the substantial development work involved. POS suppliers can therefore focus entirely on store automation and the more and more complex POS application requirements.

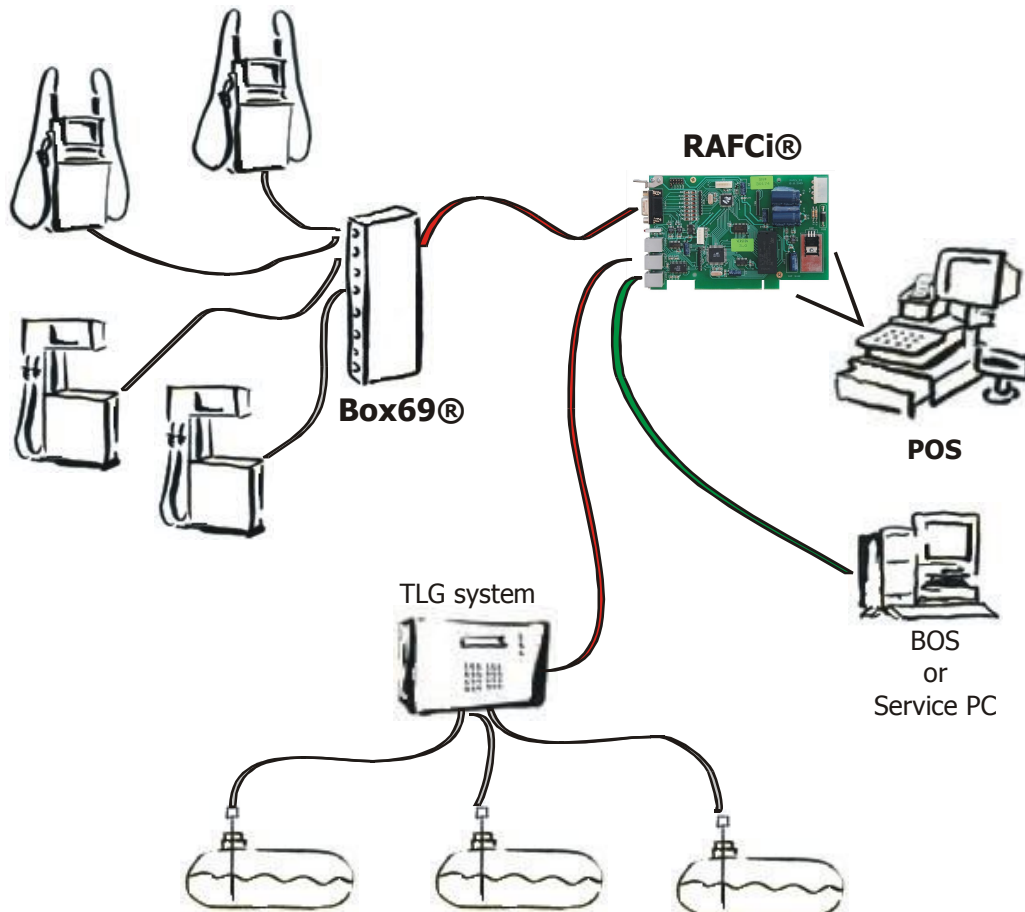

The main advantages are:

- Easy POS integration.
- Usage of a stable and well-proven forecourt application.
- Flexibility for retailers to perform independent updates of both POS and forecourt equipment.
- Very low maintenance cost.
- Standard serial POS protocol.
- Up to 32 fuelling positions.
- Up to 32 Tank probes via TLS-350 compatible console.
- Designed to be installed in POS PC's PCI slot.
